April 14, 2007

Sergeant Detective Courtney Matthews
Boston Police Department
One Schroeder Plaza
Boston, Ma. 02120

Dear Sergeant Matthews:

We have completed our audit of the Laboratory's analysis of the thirteen items, that you requested by letter dated March 19, 2007. The results of our audit revealed the following:

- 1) Items [REDACTED] were properly identified.
- 2) Items [REDACTED] consisting of tablets marked DAN 5599, were identified by appearance and labeling as containing the Class E drug Acetohexamide. However, our audit revealed that the tablets should have been identified as containing the Class E drug Trazodone.
- 3) Item [REDACTED] consisting of tablets with the markings DAN 5600, were identified by appearance and labeling as containing the Class E drug Verapamil. Our audit revealed that these tablets should also have been identified as containing the Class E drug Trazodone.
- 4) Item [REDACTED], consisting of tablets marked M 321, were identified by appearance and labeling as containing the Class E drug Metoprolol. Our audit revealed that the tablets should have been reported as containing the Class C drug Lorazepam.
- 5) Item [REDACTED] consisting of blue tablets marked 274 on one side and 1 on the other side were identified by appearance and labeling as containing Secobarbital and Ephedrine. We discovered several pharmaceuticals with similar markings. The laboratory would need to re-examine the tablets to verify the identity of the tablet submitted.

The Laboratory has determined that the following errors were made in the examination of four of the items by appearance and labeling.

Items [REDACTED]

Chemist Zhi Tan made note that each item consisted of white tablets with the manufacturer's markings DAN/DAN on one side and 5599 on the other side. When he checked the markings in our Physicians Desk Reference (PDR) for Generic Drugs, 1997 edition, he mistakenly reported the findings for tablets with markings DAN/DAN 5598, Acetohexamide.

Item [REDACTED]

Chemist Zhi Tan made note of six white tablets with manufacturer's markings DAN/DAN on one side and 5600 on the other. When he checked the markings in the 1997 PDR for Generics he mistakenly reported the findings for tablets with markings DAN/DAN 5601, Verapamil.

Item [REDACTED]

Chemist Zhi Tan made note of 15 white tablets with manufacturer's markings of M on one side, and 321 on the other. When he checked the markings in the reference guide he mistakenly reported the results for tablets with the markings M 32, Metoprolol.

We believe that these errors were transcription errors made by chemist Zhi Tan. We are conducting a review of Mr. Tan's work to determine if other errors may have occurred.

I hope this information is helpful in your current auditing process, and the Department and I look forward to assisting you in the further auditing of analyzed items.

Sincerely,

Charles Salemi
Laboratory Supervisor
Department of Public Health
Drug Analysis Laboratory
305 South Street
